Dr. Md. Nazmul Alam  
MD (Oncology)  
Associate Professor & Clinical Oncologist

Radiological Report	X ID No: 547	Date: 04 Mar 2025	Rec. No. 525818
Name :	Gazi Jaima Ahmed	Age: 10 Y	Sex: F
Referred by :	Prof. Dr. M Kabirul Islam MBBS MS		
Skiagram of :	Skull Both Views		

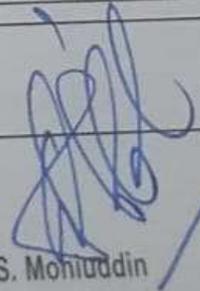

Radiological Findings :

SKULL BOTH VIEWS

No definite bony lesion is detected.  
Sella turcica is normal in size and shape.  
No pathological calcification or any evidence  
of raised intracranial tension is detected.  
Shadow of the adenoid pad is mildly enlarged.

Impression : Mildly enlarged adenoid – grade - I.  
No other significant abnormality is detected.

Advice :

  
Prof. Dr. A. S. Moniruddin  
MBBS, DMRD, MD (Radiology)  
Former Head & Senior Consultant

Ultrasonogram Report

Date: 04-Mar-2025

Order Id: 525818

Name : Gazi Jaïma Ahmed Age : 10 Y Sex : Female

Referred by : Prof.Dr.M Kabirul Islam MBBS MS

Part Imaged : USG of Head

Findings :

*Examined by high frequency probe (13 MHz)*

*A fairly large concavo convex mixed echogenic semi cystic area with thick wall margin is seen in the postero superior aspect of occipital region of skull measures about 3.5 x 1.2 cm.*

*Another hypoechoic focal area with thick wall margin is also seen adjacent to this above said focal area measuring about 1.6 x 0.5 cm.*

*Comment : Suggestive of multifocal subcutaneous lesion of different sizes & echopattern in the postero superior aspect of occipital region of scalp - possibility of sebaceous cyst or dermoid cyst could not be ruled out.*

**Prof. Dr. Md. Delwar Hossain**

MBBS (Dhaka), DMRD (D.U)

Ex-Professor & Head

Department of Radiology & Imaging

National Institute of Cardiovascular

Diseases (NICVD), Dhaka.
